SERVICES WE PROVIDE

SALES

We have a dedicated team of sales professionals who cover the whole of the UK. We offer free onsite surveys to any customer looking to use a forklift on their site or expand the fleet they currently have.

An onsite survey allows our salesman to ensure the equipment provided is suited to all customers requirements.

SERVICES

Stacatruc's dedicated and efficient service team are always on hand to take your breakdown call and direct one of our highly qualified, CFTS accredited field service engineers to the breakdown, with an average 4 hour response time for emergency calls.

HIRE

Just like buying a forklift truck from us, we work with you, so you get the correct hire plan for you and/or your business.

BREAKDOWNS

Regular preventive maintenance helps avoid breakdowns. If unforeseen problems do occur with Stacatruc, your business will be back on the move as quickly as possible.

REPAIRS

Our engineers are trained to all current CFTS (Consolidated Fork Truck Services) standards for thorough examinations.

RACKING DESIGN

Our expertise lies in our ability to search the whole marketplace to find the best fit for your requirements. This includes racking, shelving and mezzanine floors. We specialise in the design and supply of all types of storage equipment solutions.

FORKLIFT TRAINING

We provide both in-house and ITSSAR accredited Forklift truck training on-site at your company premises nationwide. Our services are priced competitively with the added benefit of being able to train at whichever hour of the day (or day of the week) that may work best around your current workplace arrangements.

We use the latest training techniques; combining theory and practical exercises in accordance with current Health and Safety Executive (HSE) guidelines tailored to your site-specific needs – resulting in an impressive success rate across all of our courses.

Find the best forklift type for your material handling needs. We will enable you to find the right power source for your application.
